

1 Collect & Inventory

Firstly, we package and ship your equipment to our nearest warehouse. Then we make an inventory of every part and present the final list to you for verification and also to provide you with the opportunity to recall any parts that you may still require.

2 Market & Sell

Once the inventory is agreed we will market your equipment to our worldwide customer base. Our multilingual sales team maintain an active database of business partners in more than 100 countries and we will prioritise the sales to telecommunications operators which greatly increases the return to you.

3 Report & Invoicing

Finally, every month we will send you a report on what has been sold together with a purchase order for you to raise an invoice. We will bear all risk relative to any debt collection issues that may arise with the purchaser of the equipment. We will also evaluate the saleability of remaining assets and provide any recommendation including disposal as WEEE. You also have access to our online portal giving you real time information on the status of your stock and the ongoing financial results.
